

Standards Reference List

Standards relevant to ProofRoad. This file lists references and scope; it does not reproduce copyrighted standards.

1. ISO 21815-1:2022

Earth-moving machinery — Collision warning and avoidance — Part 1: General requirements. Scope includes earth-moving machinery and mobile underground mining machinery; covers detection, operator warnings, automatic intervention control and test procedures. ■cite■turn0search0■

2. ISO 19014-1:2018 / current revision activity

Earth-moving machinery — Functional safety — Part 1: Methodology to determine safety-related parts of the control system and performance requirements. ISO describes a methodology based on machine control system safety analysis and required machine performance level. ■cite■turn0search1■turn0search3■

Important for the SIH deck: do not claim compliance based on referencing the standard. ProofRoad itself explicitly says it is not certified.

3. ISO 19014-2:2022 / current revision activity

Earth-moving machinery — Functional safety — Part 2: Design and evaluation of hardware and architecture requirements for safety-related parts of the control system. ISO describes principles for development and evaluation of achieved machine performance level for safety-control systems. ■cite■turn0search4■turn0search7■

4. ISA/IEC 62443

ProofRoad references ISA/IEC 62443 as the intended production cybersecurity practice for industrial automation/control security. The uploaded document does not claim compliance. Production architecture should therefore treat this as a future formal-security workstream.
